

Essential # 5 – Embrace Biological Dentistry

Your teeth are an intricate part of your body...not a separate entity that should be drilled, poked and stuffed with toxic poisons.

Traditional dentistry approaches your teeth as separate entities that have no relationship to the rest of your body. Biological dentists, however, understand the big picture.

They understand that amalgam fillings do NOT belong in the mouth because of the high mercury content. Mercury is one of the most toxic substances on the planet. It is treated as an environmental bio-hazard material in a dental office and yet many dentists still promote the use of it.

Aside from the heavy metal toxicity, each tooth has a meridian that runs through it that corresponds to a specific organ. A piece of metal or a root canal in the tooth acts like a brick wall and prevents the energy or life force of that organ to flow properly, which, long term, can stress that corresponding organ.

For example, the 4th and 5th teeth in your top jaw, counting from the center, correspond to your breasts.

Having worked with Bio-energetic Testing devices for over 25 years, I have repeatedly seen the relationship between specific diseased organs and the dental meridians.

Statistically, 90% of people diagnosed with cancer have 1 or more root canals. Fortunately, there are more trained biological dentists that understand the concepts of natural healing and often work with other like-minded professionals for the benefit of the patient.

Our coaching program will point you in the direction of expert biological dentists and specific detoxification protocols after dental work.

Tomorrow I take a look at the plethora of information out there about natural medicine. Let me take the confusion out of ALL those healing supplements out there with **Essential # 6 – Heal Your Body with Therapeutic Plants and Herbs.**

I hope you are enjoying this information.
