

Making Sure Your Biological Dentist is the “Real Deal”

1. Where did you get your training for Biological Dentistry?
2. Do you believe that amalgams are toxic and create a biological hazard to the body?
3. How do you feel about the relationship between amalgams and various diseases?
4. When you remove amalgams, do you initially use an amalgameter to test the electrical charge on the tooth to see which quadrant needs primary attention?
5. Do you offer a serum compatibility blood test in order to determine what materials will not create an allergic reaction when you replace the amalgams?
6. Do you believe that there is a tooth-organ relationship through the acupuncture meridian system? In other words, do you believe that a toxic tooth could have an effect on a particular organ?
7. When you remove and replace amalgams, do you use special mercury vapor filters and offer oxygen while I am getting the procedure?
8. Do you use a rubber dam to protect my mouth from pieces of amalgam that are being removed?
9. How do you feel about Root Canals? Metal Implants?
10. Do you offer any type of dental detox and nutritional support?
11. Do you belong to a professional organization that supports biological or mercury free dentistry? Which one?
12. How many years you been doing these procedures?
